Introduction

Duckhashbit is project that everyone waiting for and why Duck, why not else. duck will show you most interesting part. and most interesting thing is that only every investor feels benefits, especially from Duck like nft rarity which is an incentive for holder.

Project Overview

Duck Hashbit is a project recommended by the hashbit community and of course this is a legit project and is trusted by the hashbit team. duck hashbit has very good hallmarks and characteristics. apart from that duck has a very big purpose in hashbit chain. main goal is to run project as well as possible and develop products such as managing marketplace and benefiting nft and coin holders. duck manages with great ambition and has a very great desire to succeed.

Vision & Mission

Vision : we build a future that enables everyone to be on the path of success with duckhashbit, and give meaningful interactions in duck hashbit that benefit everyone and build a strong community.

Mission : To empower users of all levels by building a strong community and a very lively chain to recommend and provide lots of leads on duckhashbit.

Chose Hashbit

Why Duck Chose Hashbit Smart Chain?

Duck chose hashbit smart chain because cost of gas is very cheap, even almost zero as well as fast performance and a very effective chain for developing for duck hashbit. not only fast and effective but hashbit chain also has a very large and strong community that's why duck chose hashbit.

Frequent problem

Everyone will come to duckhashbit and will ask questions about project goals and problems that often occur in duckhashbit, but team will try to solve problems in a good and thorough manner. not only solving problems that occur from community, of course, problems in the service will be fully resolved. such as questions that exist in community about purpose of tokens and nft that are used and marketplace this can still be handled and resolved and instructions are given for using the product and purpose of creating product.

Scalability

Blockchain was developed as a network specifically to decentralize interactions between participants. all of participating nodes have equal representation and run without a central governing authority. problems arise when an increasing number of nodes and transitions grow in blockchain, causing a scalability problem because every node must store and execute its own computational tasks to validate transactions.

Growing popularity of blockchain means that performance and adoption of this technology for practical uses are becoming increasingly difficult as more people join in. taking Bitcoin as an example, it processes almost 7 transactions every second while Visa completes almost 1,700 transactions every second on average? there is a clear difference between the scalability of Visa and blockchain technology.

Interoperability

Interoperability has become second nature in our modern world, from email to smartphones, and email, it's both commonplace and incredibly necessary. The blockchain industry is growing and with it, numerous promising blockchains are popping up, each claiming to be better than the last. yet blockchains are growing in a parallel way, due to how the traditional architecture of blockchains does not allow them to communicate with each other, this forces each blockchain to operate within a silos.

Why DuckHashbit?

why not another. duck will show you most interesting part. and most interesting thing is that only every investor feels benefits, especially from ducks like scarcity of nft which is an incentive for holder. as well as auto whitelist when every project is on duck hashbit. other things that investors can get apart from nft and whitelist. they get a platform profile which of course can be used and can be sold or bought through Duckhashbit marketplace.

Adoption Duck

In adopting a duck, you can not only have free tokens, but you can also receive an NFT profile as a bonus for adopting a duck. duck has many roles in it when you adopt. like you feed them the same way you feed your pets in the real world. besides that you can have adventures in it like receiving lots of coins and exploring to get lots of $hduck

Mint NFT

The nft that you will get is in the form of NFT Duck which contains a very effective number of coins. for duck adoption. the benefit is that mint nft duck is the same as receiving gifts according to the list, there are three lists of nft lists, the number of which corresponds to HDUCK.

Common

Uncommon

Rare

Epic

Hero

HDUCK Reward NFT :

Common : 0.5 HDUCK

Uncommon : 5 HDUCK

Rare :50 HDUCK

Epic : 500 HDUCK

Hero : 5,000

a more detailed explanation, if you accept one of the characters that contains common, uncommon, rare, epic, and hero. You can hold NFT to receive rewards in the form of tokens every week, and automatic distribution through predetermined contracts.

Marketplace

The nft market that is trying to manage is Duck Hashbit NFT market. this market will be undergoing beta testing for a while and if it passes the beta testing then we will refer deeper to processing marketplace and open or public various types of nft that can be managed in hashbit chain network. apart from managing NFT market Duck Hashbit will have more competition which is beneficial for everyone.

Incentive

Incentives that will be held are beta testing incentives. During beta testing, many incentives will come out. starting from beta testing apps and beta testing services managed by Duckhashbit project.total incentives that will be issued each beta testing is $2,000 in form of $HDUCK tokens. why use $HDUCK as incentive reward. because if you use duck hashbit coin they still have swap history and it will be useful in future, as retroactive history. and not only as a retroactivity in the future but as a sign that useful addresses will one day be whitelisted in any category.

80%

■ Lock supply 80%
■ Presale 19,5%
■ Burn 0,5%
■ Liquidity 100%

Roadmap

Phase 1

› Deploy Contract
› Launch Website
› Twitter & Telegram
› Community
› Presale
› Lock Supply
› Burn
› Listing Hashbit Dex

Phase 2

› Beta Testing App
› Mint NFT
› Adoption
› Partnership
› Distribution Reward

Phase 3
› Trending Coin
› Coingecko Listing
› Coinmarketcap Listing
› Cex Listing
› Marketplace

Phase 4

› Upgrade System
› Event Community
› Looking More Partnership
› Check out upcoming update
